

## Miss Yip's Book Sharing

<b>Title :</b>	<u>How Do I See?</u>
<b>Author / Publisher :</b>	<u>Katie Daynes / Usborne Publishing</u>
<b>Content &amp; Comment :</b>	<p><u>How many eyes does a spider have? Two? Six or eight? The answer is eight. Actually jumping spiders use their side eyes to spot things moving, and their front eyes to see size and shape.</u></p> <p><u>Another question: Do insects see what we see? Yes or no? In fact, not really because their eyes have hundreds of tiny lenses, so they see things as hundreds of litter images.</u></p> <p><u>What about our ears? How many ears do we have? Why do we have two ears instead of one? Because two ears hear better than one and together they can tell you where a sound is coming from.</u></p> <p><u>Do you think these questions are interesting? The questions and answers are in this book. The title of this book is "How do I see?" There are lots of other interesting questions and answers about our 5 senses. There are, also, other books in this series too. Like "Why Do We Need Bees?", "Where Do Babies Come From?", "What Makes It Rain?" and "How Do Flowers Grow?"</u></p>
<b>Source of the Book :</b>	<u>You can find this book "How Do I See?" on the bookshelf of 600 Technology in our school library.</u>
